OFFICE OF ENERGY INFRASTRUCTURE SAFETY 715 P Street, 20th Floor | Sacramento, CA 95814 916.902.6000 | www.energysafety.ca.gov

Caroline Thomas Jacobs, Director

Below is the text of the 2022 Utility Wildfire Mitigation Maturity Survey (Maturity Survey) that the Office of Energy Infrastructure Safety (Energy Safety) sent to the following electrical corporations on December 15, 2021: Pacific Gas and Electric Company, Southern California Edison, San Diego Gas & Electric, Bear Valley Electric Service, Liberty Utilities, PacifiCorp, Horizon West, and Trans Bay Cable. Energy Safety also sent each utility a unique link to its individual online Maturity Survey. In the online format of the Maturity Survey, each question includes the electrical corporation's 2021 responses. In the PDF format of the Maturity Survey below, the 2021 responses appear as code (e.g., "Your utility's responses last year were: Present: \$\{e://Field/QAlar1_2020\}\ As of January 1, 2023: \$\{e://Field/QAlar2_3%20years\}").

Maturity Survey 2022

Start of Block: Welcome

Purpose of Maturity Survey:

The Office of Energy Infrastructure Safety (Energy Safety, formerly the Wildfire Safety Division) will use this survey, in addition to other inputs, to evaluate the electrical corporation's (utility's) maturity level, establishing a present maturity level and a target maturity level for the beginning of 2023 (maturity expected as of January 1, 2023).

Energy Safety's assessment of the utility's maturity will also be informed by the utility's Wildfire Mitigation Plan submission, other supporting documents and disclosures, and audits of relevant inputs where deemed necessary.

Instructions for answering each of the survey questions:

Utilities shall answer survey questions by:

- 1. Indicating the most appropriate response option to each question based on the **presently employed practices and capabilities** of the utility.
- 2. Indicating the most appropriate response to each question for the utility's expected capabilities as of January 1, 2023, based on its expected growth in maturity over the coming year.

Only one response option should be selected unless the question is specified as "select all that apply."

Utilities must indicate that they meet a given response option **only** if they meet **all** of the characteristics described within that response option, across **all instances** where that question is valid.

For example, if a utility meets all criteria for answer *ii* of a given question and all but one criterion for answer *iii*, that utility must select answer *ii*. Similarly, if a utility meets all criteria for answer *ii* of a given question over 60% of its territory but meets all criteria for answer *i* over 100% of its territory, the utility must select answer *i*.

Instructions for use of the electronic survey:

Please fill out the electronic survey in its entirety.

The unique link provided to you can be used on multiple devices. Please only access the link on a single device at a time. To avoid creation of any conflict copies, please allow 15 minutes to pass before switching between devices. For example, if passing the survey off to a colleague on a different machine please have the colleague wait for 15 minutes after you stop working to begin.

If you are completing the survey in multiple sittings, your progress will be saved. You may use the unique link provided to you to resume where you left off.

Confirmation of survey responses:

The main utility contact as designated in the electronic survey will receive a PDF of the utility's responses for final verification by email within two business days of completing and submitting the survey in its entirety. Please review that document, confirm all responses one final time, and provide a signature on the verification form as instructed in the PDF. Please return to Energy Safety the signed form along with the verified responses in one PDF document, putting the verification at the front of the combined PDF.

The utility's respons verification.	es will be e	evaluated	by Energy	Safety follow	ving receipt o	f this final

A.I.b How are scenarios assessed?

<u>Clarification</u>: Per the instructions, please only indicate that you meet a given response option if <u>you meet all the characteristics described within that response option</u>). For example, if you do

support your scenarios assessment with historical data of incidents and near misses and conduct internal assessments, but don't have an independent expert assessment, you would select *ii*.

Your utility's re	sponses last yea	r were:

Start of Block: A.V Risk maps and simulation algorithms

A.V Risk maps and simulation algorithms Capability 5

<u>Clarification on terminology</u>: A risk map is a collection of data sufficient to represent the spatial distribution (e.g., across a geography) of a given type of risk (i.e., the probability of an event and its consequence) and the spatial representation thereof. Risk maps may include maps of the probability of ignition along the utility's grid and may represent the consequences given ignition at various points along the grid. Risk maps may also combine these factors to show a weighted probability and consequence risk level across the utility's grid. Data inputs should include the variables and conditions used to calculate risk for a given point, line, or polygon. The risk mapping algorithm is a methodology or formula for interpreting a risk calculation from these data inputs.

X→

A.V.a What is the protocol to update risk mapping algorithms?

H.VI.b How does the utility develop and evaluate the risk-spend efficiency of new wildfire initiatives?

<u>Clarification</u>: In response *ii* below, "total cost of ownership" is the cost over the expected useful life of an asset, including purchase, operation and maintenance, and here refers in particular to the spend portion used in the evaluation of risk-spend efficiency, while risk reduction is evaluated separately.

Your utility's responses last year were:

H.VI.d Are the reviews of innovative initiatives audited by independent parties?

<u>Clarification</u>: Here, "reviews" refers to findings evaluating innovative initiatives which would

assist another utility in making a decision about whether to implement that initiative and help it determine how to do so effectively. Criteria might include but are not limited to the following: technical feasibility, effectiveness, risk-spend efficiency, ease of implementation, and comparison to alternative options.

I.I Wildfire plan in	ntegrated with overall disaster/ emergency plan Capability	43
X→		

I.l.a Is the wildfire plan integrated with overall disaster and emergency plans?

<u>Clarification</u>: If the utility's Wildfire Mitigation Plan is an integrated component of an overall disaster and emergency plan, then the overall plan considers at least the compound effects of risks in both directions. For example, the plan considers the additional risk of fire posed by an earthquake and how to manage any compounding effects.
