Dear all,

Please see the attached email comments from Mikael Genachte from Kagel Canyon regarding PSPS shutdowns

Subject: SCE PSPS shutdowns meeting

With the Covid crisis, a lot of people work from home and kids are homeschooled. With these non-stop power outages, we lose money and our kids miss a lot of important classes.
I understand that it is for our safety and to prevent wildfires, but cutting off the power on any windy day is just avoiding solving the problem (and making a real investment)
In Europe, they buried their power lines decades ago. I don't know if it's the right solution, but at least they did something concrete so they don't shut down the power every time it's a little windy.
Is Edison developing a real investment plan to effectively solve the problem or is their only answer to cut the power with every storm? (and put many families in difficulty).

Spectrum also cut internet. So even though we have a generator, we still don't have the possibility to work
Thank you

Mikael Genachte
